

Creative and ambitious technologist seeking an opportunity to contribute to LEGO's innovative digital initiatives.

LEGO's ambition to make a positive and joyful impact on people's lives makes perfect sense to me. This ambition, combined with my own wonderful memories of building LEGO, has ignited my desire to be part of an inspiring and diverse workplace.

If you choose me, you will get a candidate who:

- Has extensive experience with data science and general computer science.
- Excels at teamwork and has a strong creative mindset.
- Dreams of contributing to the spread of playfulness through creative tech solutions.

My name is Tomas, and I hold a Bachelor's degree in Computer Science from the University of Copenhagen. I currently work as CTO and co-owner of Drivn ApS — a Danish startup helping companies track and reduce carbon emissions from employee commuting. In my role, I have built full-stack web and mobile applications using technologies like React, React Native, Python, and PostgreSQL, and I designed and deployed our cloud infrastructure using AWS and CI/CD pipelines.

At Drivn, I have also led the development of a machine learning model that predicts transportation modes based on GPS and motion data — an essential feature for our emission tracking system. Leading the technical direction of a growing platform and mentoring interns has strengthened both my technical expertise and my ability to drive a project from concept to scale.

I enjoy building systems and tackling complex problems, and I often find it hard to step away when I'm deep into a challenge. That said, I'm not glued to my screen all day — I actively seek out conversations with friends and colleagues to clear my head, gain new perspectives, and spark fresh ideas.

Learning new things inspires me. When I come across something I don't understand, I make sure to delve into it to ensure the best possible end product.

I believe that as a modern company, there is a responsibility to contribute to the development of innovative solutions that promote progress and growth.

As an IT Student Worker at Knowledge Cube, I gained insight into how it is to work with IT in the "real world", which ultimately confirmed that I had found the right field of work for me. I was introduced to the general workflow in an IT company and learned what it means to take responsibility for a task.

In the future, I aim to work creatively and purposefully to contribute to the development and progress of the world around me. I am driven to inspire and be inspired, and it is important for me to make a difference with what I do in my professional life.

In a position at LEGO, I believe I can contribute to an ambitious, creative, safe, and fun work environment where innovation is paramount.

I am excited to find out if LEGO is where I will find new challenges, and I am looking forward to hearing from you.

Best regards,
Tomas
