👤 Professional Summary

CTO and Full-Stack Developer with extensive experience leading the technical development of digital platforms. Proven ability to manage teams, design scalable architectures, and deliver production-ready applications using modern stacks. Passionate about automation, data-driven solutions, and creating impactful user experiences. Currently seeking opportunities to contribute innovative solutions in a dynamic and collaborative environment such as LEGO.

✂️ Technical Skills

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Frameworks:** React, React Native, Flask, Svelte
- **Cloud/DevOps:** AWS, Firebase, CI/CD
- **Databases:** PostgreSQL, MySQL, SQL
- **Tools:** Git, Docker

💻 Experience

CTO / Technical Lead, Drivn ApS:

May 2024 – Present

- Directed all technical strategy, architecture, and decision-making from MVP to scalable platform.
- Built cross-platform apps using React, React Native, and Python.
- Designed and maintained secure AWS infrastructure with CI/CD pipelines.
- Supervised a team of interns and collaborators, including 8 students from the IT University of Copenhagen.
- Developed a machine learning model (Random Forest) for transportation mode detection and carbon tracking.

IT Student Worker, Knowledge Cube:

Mar 2021 – Mar 2022

- Participated in corporate IT operations with a focus on data quality and system integration.
- Worked with relational databases to retrieve, analyze, and update structured datasets.
- Collaborated in software development tasks as part of a cross-functional IT team.

🎓 Education

BSc in Computer Science:

2020 – 2024

University of Copenhagen

- **Thesis:** Designed a machine learning model to predict attributes of Danish badminton players.
- **Key Courses:** Modelling and Analysis of Data, Algorithms and Data Structures, Mathematical Analysis and Probability Theory,
